HOSPITALITY OS

HOSPITALITY OPERATIONS SYSTEM

RUN THE LODGE WITH CONFIDENCE

Stop losing bookings, money, and stock in scattered admin.

Tsa Bonno HospitalityOS brings front desk operations, billing, POS, inventory, owner oversight, and direct online reservations into one connected lodge system.

WHAT TSA BONNO FIXES FIRST

The costly problems are usually hiding in ordinary daily work.

Tsa Bonno is built around the pressure points that make a lodge harder to control: unclear bookings, uncertain balances, quiet stock losses, delayed owner updates, and online enquiries that live outside the front desk.

1. **Double-bookings and room confusion**
   Room planning, arrivals, departures, and booking status stay visible in one place.

2. **Missed payments and unclear balances**
   Invoices, payments, balances, and follow-ups are easier to track.

3. **Stock disappearing quietly**
   POS, inventory, low-stock alerts, and room supplies help reduce leakage.

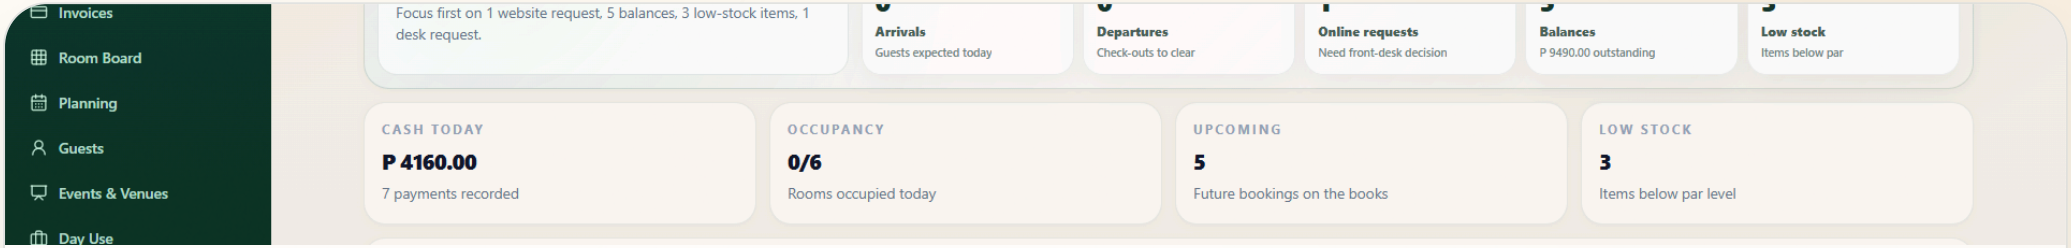
4. **Owners waiting for manual updates**
   The Manager App gives owners and managers a live mobile view of operations.

5. **Online enquiries outside the system**
   The Booking Site sends direct guest requests into Tsa Bonno for front desk action.

THE TSA BONNO ECOSYSTEM

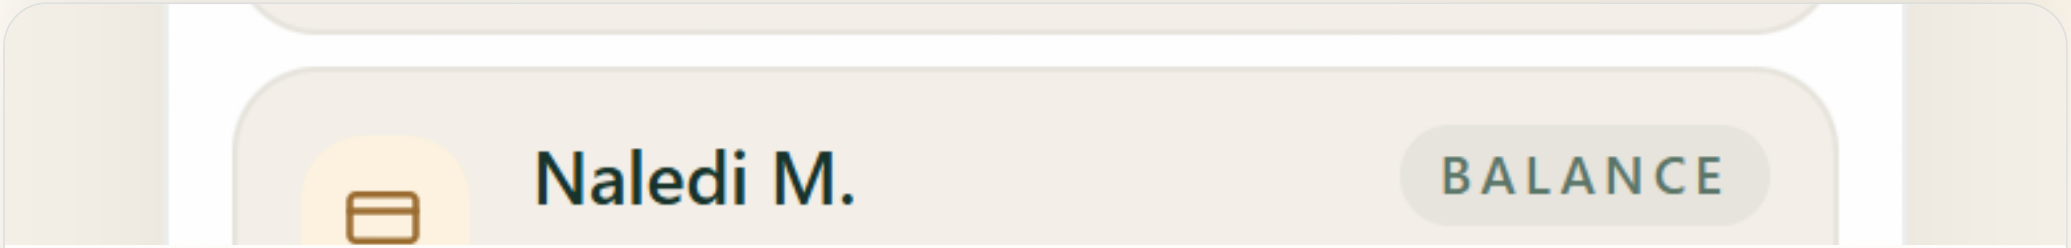
One product family for the front desk, the owner, and the guest.

Tsa Bonno is strongest when the full operating loop is connected: the desktop app runs the lodge, the manager app gives oversight, and the booking site creates direct demand.



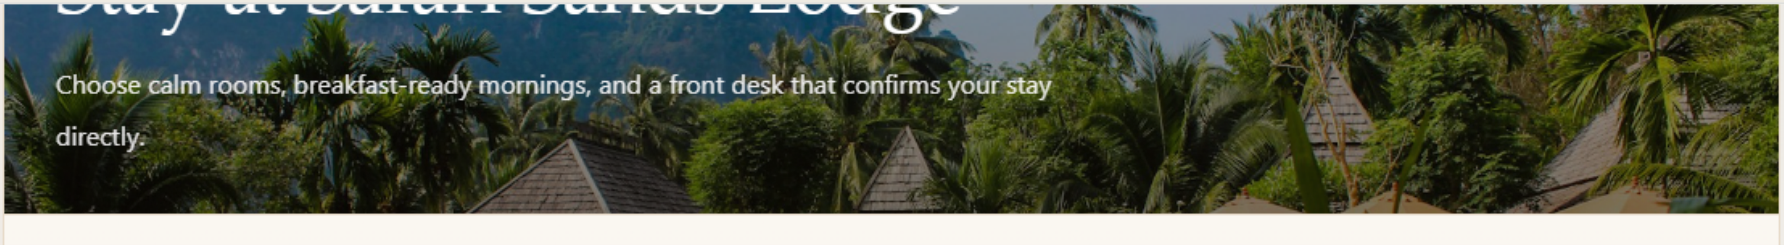
Desktop App

For reception and front desk teams managing bookings, rooms, billing, POS, stock, reports, and day-to-day operations.



Manager App

For owners and managers who need mobile visibility into money, rooms, alerts, bookings, and operational pressure.



Booking Site

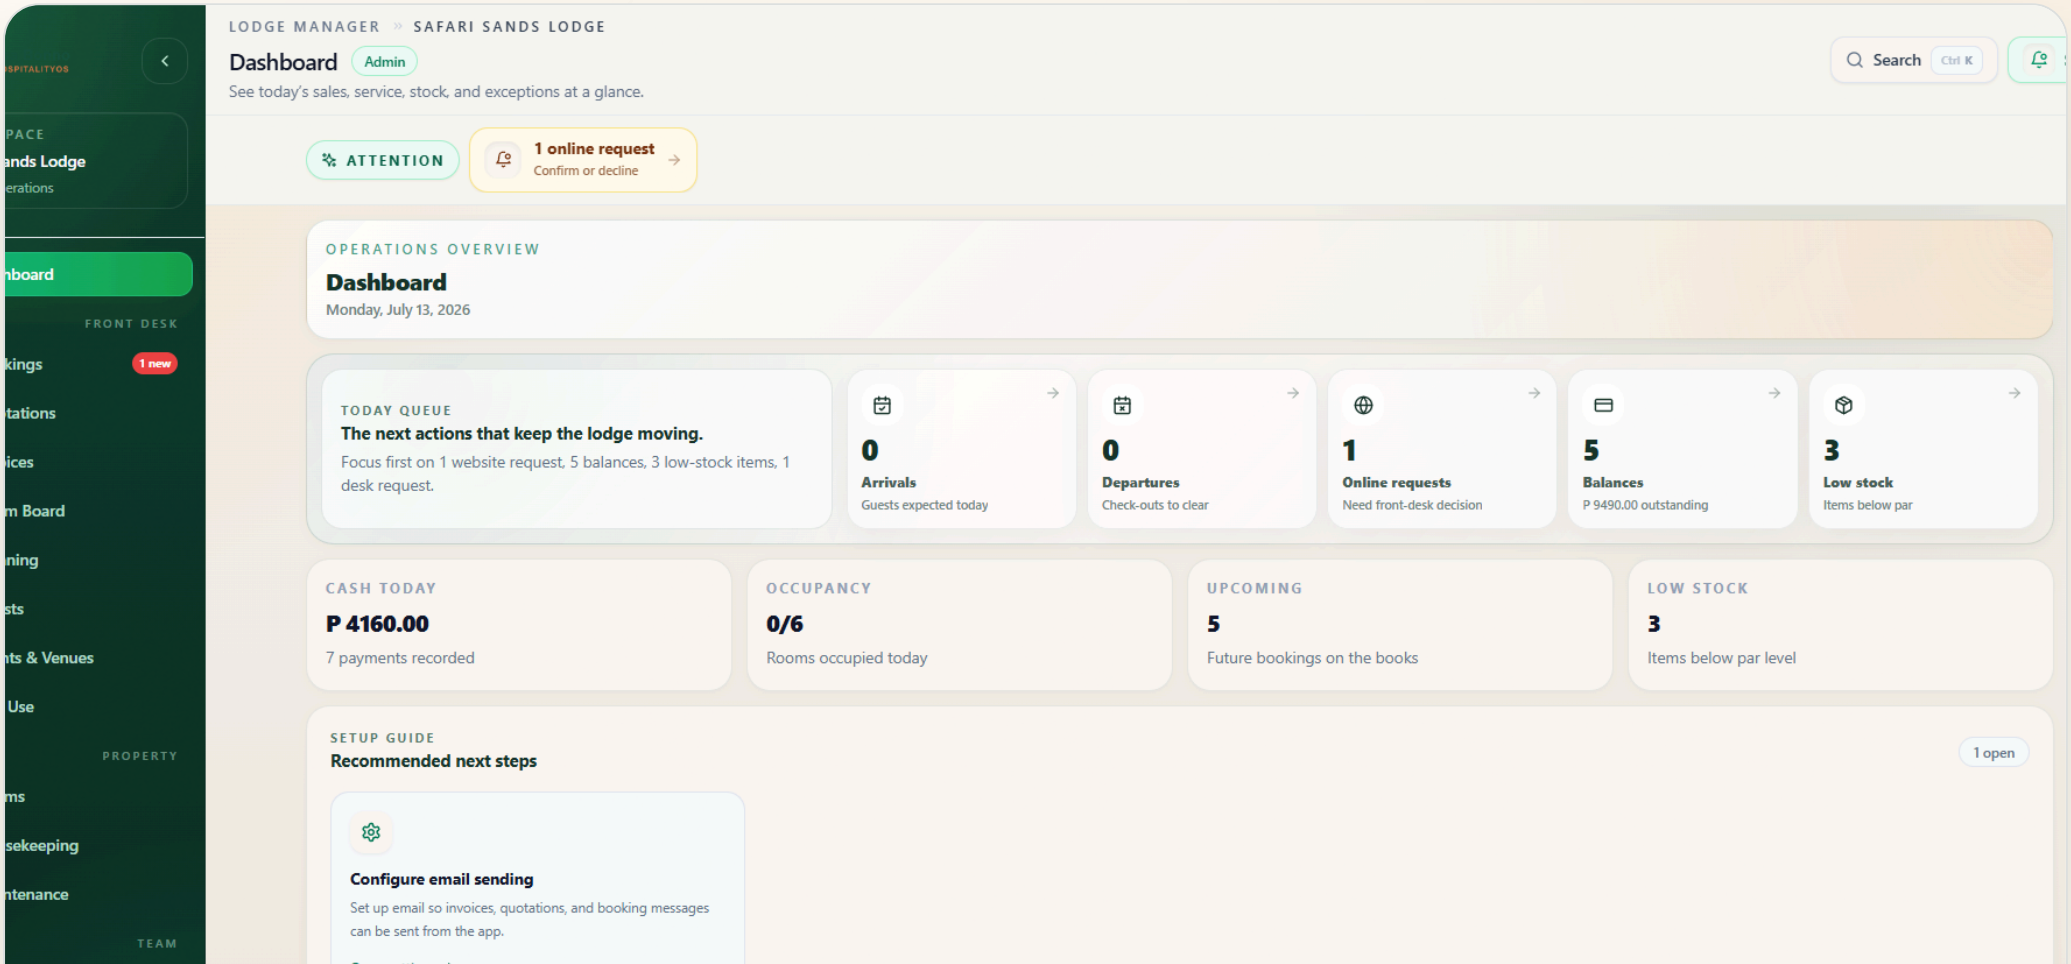
A branded direct booking page where guests search rooms, send requests, and contact the lodge without commission.

THE DESKTOP APP

The front desk gets a real command centre, not another spreadsheet.

The Desktop App is where the lodge operates every day. It keeps reception focused on the next action: who is arriving, which rooms are occupied, who still owes money, what needs attention, and which online requests must be confirmed.

HotelOS is coming soon. Hotel Core is a separate path with the full accommodation depth for a hotel day-front desk, rooms, folios, rates, housekeeping, maintenance, reports, and night audit. Register your interest to hear from us at launch; specialist capabilities are scoped separately.



A CALMER DAY AT RECEPTION

Tsa Bonno turns the day into a sequence the team can follow.

Good lodge software should reduce anxiety. Tsa Bonno helps the team move from morning planning to guest service to evening handover without losing the operational thread.

Morning clarity

Check arrivals, departures, occupied rooms, pending requests, and rooms needing housekeeping or maintenance attention.

1

Booking discipline

Create or update bookings, assign rooms, capture guest details, and keep payment expectations visible.

2

Payment follow-up

See unpaid and partial balances before they quietly become end-of-stay surprises.

3

Room handover

Use room status and housekeeping signals so the next shift knows what is ready, dirty, occupied, or blocked.

4

Owner visibility

As the lodge matures, managers can see the health of the business without waiting for manual updates.

Starter

Not a weak entry package. A real front desk system.

Starter is for lodges that want to stop relying on scattered notebooks, memory, WhatsApp threads, and disconnected spreadsheets.

- Daily booking control
- Guest and room records
- Invoices and balances
- Users & Access Lite: max 2 users (Admin + Receptionist or Operations)
- Basic Reports: today, 7-day, and 30-day with print/PDF
- Customer-owned backup with support-led recovery
- Immutable operational audit evidence
- Guest Deposits Lite with Admin-authorized refund/reversal
- Room planning and handovers
- Offline desktop workflow

WHY STARTER ALREADY MATTERS

Starter gives the lodge operational order before anything else.

A lodge does not need to start with every advanced feature to feel the value of Tsa Bonno. If the front desk can see rooms clearly, record bookings properly, keep guest details in one place, and follow balances with less confusion, the business is already stronger.

Replace the booking book	CORE
Know room and guest status	CORE
Track unpaid and partial balances	CORE
Keep front desk handovers cleaner	CORE

WHY MOVE TO STANDARD

When the owner starts asking “what is really happening?” the lodge is ready for Standard.

Standard is the control layer. It is for lodges where daily operations are no longer enough. The owner or manager needs full Staff and Reports, clearer visibility into money and expenses, and Prepayments Management for portfolio search, reconciliation, and export.

Management reports

Turn activity into a clearer business picture instead of waiting for manual summaries.

Expenses and control

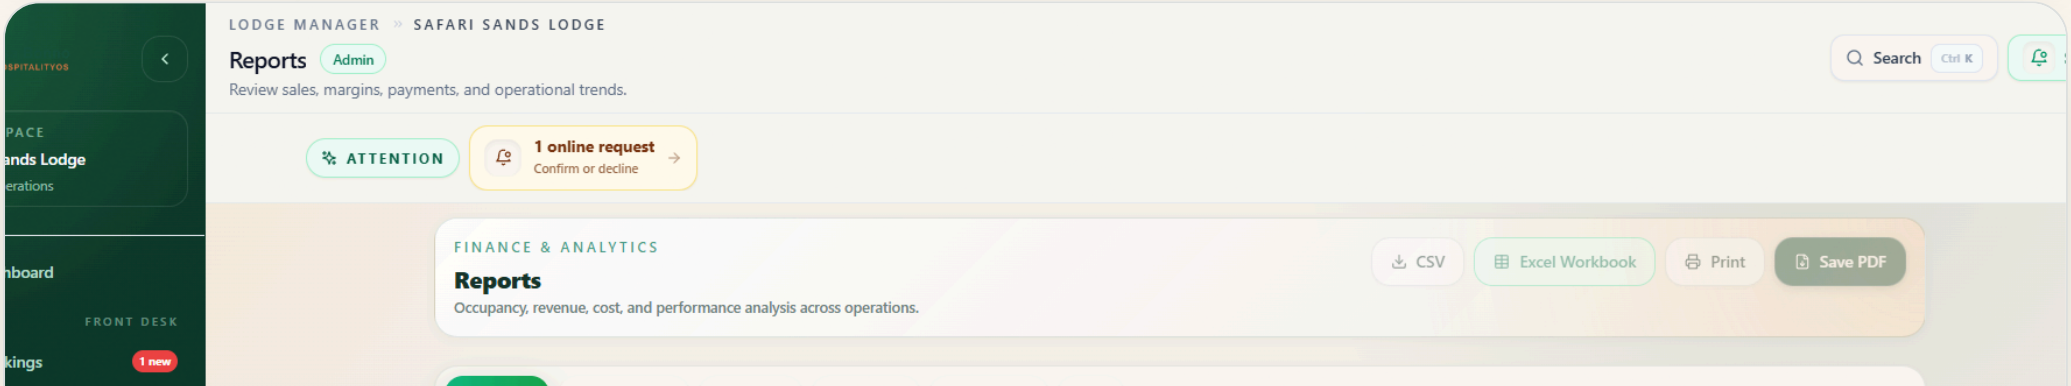
Understand operating costs alongside booking and payment activity.

Prepayments Management

Search the customer-credit portfolio, reconcile server-backed totals, and export the authoritative deposit view.

Better decisions

See patterns earlier: balances, occupancy, alerts, and areas that need attention.

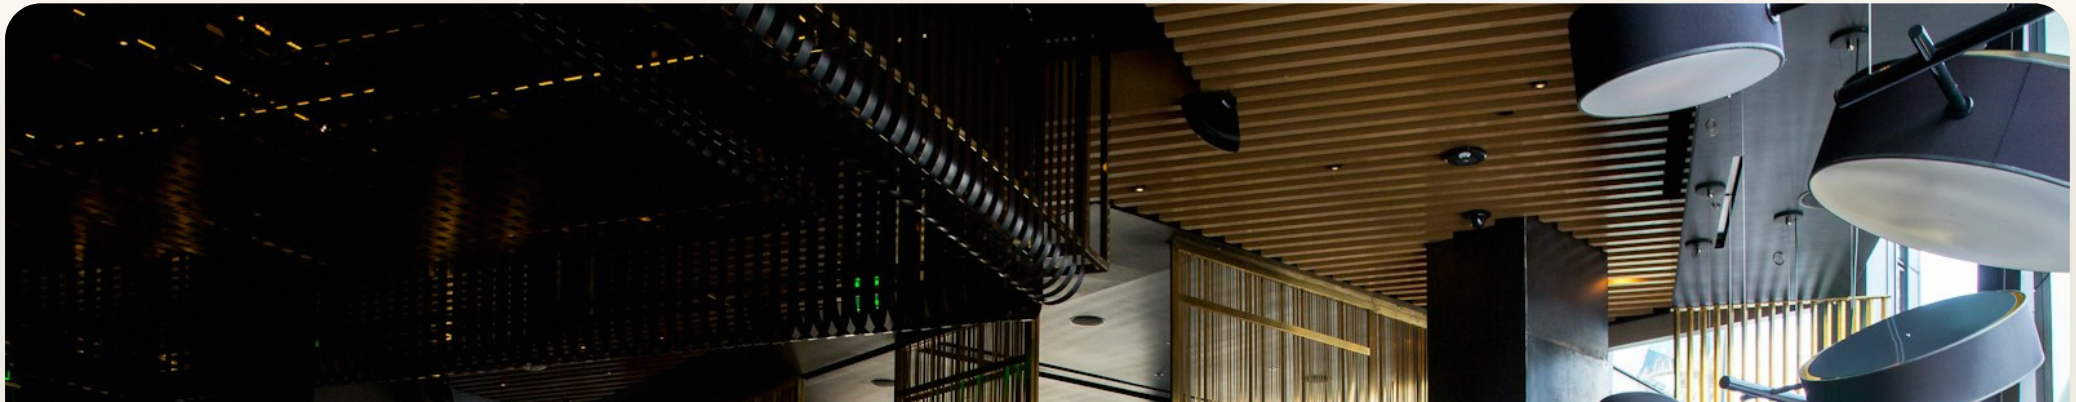


WHY MOVE TO PRO

Pro is where Tsa Bonno becomes the commercial engine of the lodge.

Pro is for lodges that are ready to connect more than rooms. It brings Credit Control & Automation, read-only Manager App oversight, direct guest demand, POS sales, stock control, supplies, and deeper operational visibility into the same system.

Direct online booking requests	GROWTH
Bar and kitchen POS	REVENUE
Inventory and low-stock alerts	CONTROL
Room supplies visibility	OPERATIONS
Ageing, advisory matching, thresholds and alerts	CREDIT CONTROL
Read-only Manager App oversight	OVERSIGHT
Best fit for growing lodges	SCALE



SELLING FEATURES

Everything a growing lodge needs to see clearly.

Tsa Bonno is practical software for real lodge work: quick enough for the front desk, structured enough for owners, and connected enough to support growth.

Bookings and rooms

Room board, arrivals, departures, guest records, and direct online requests.

Money control

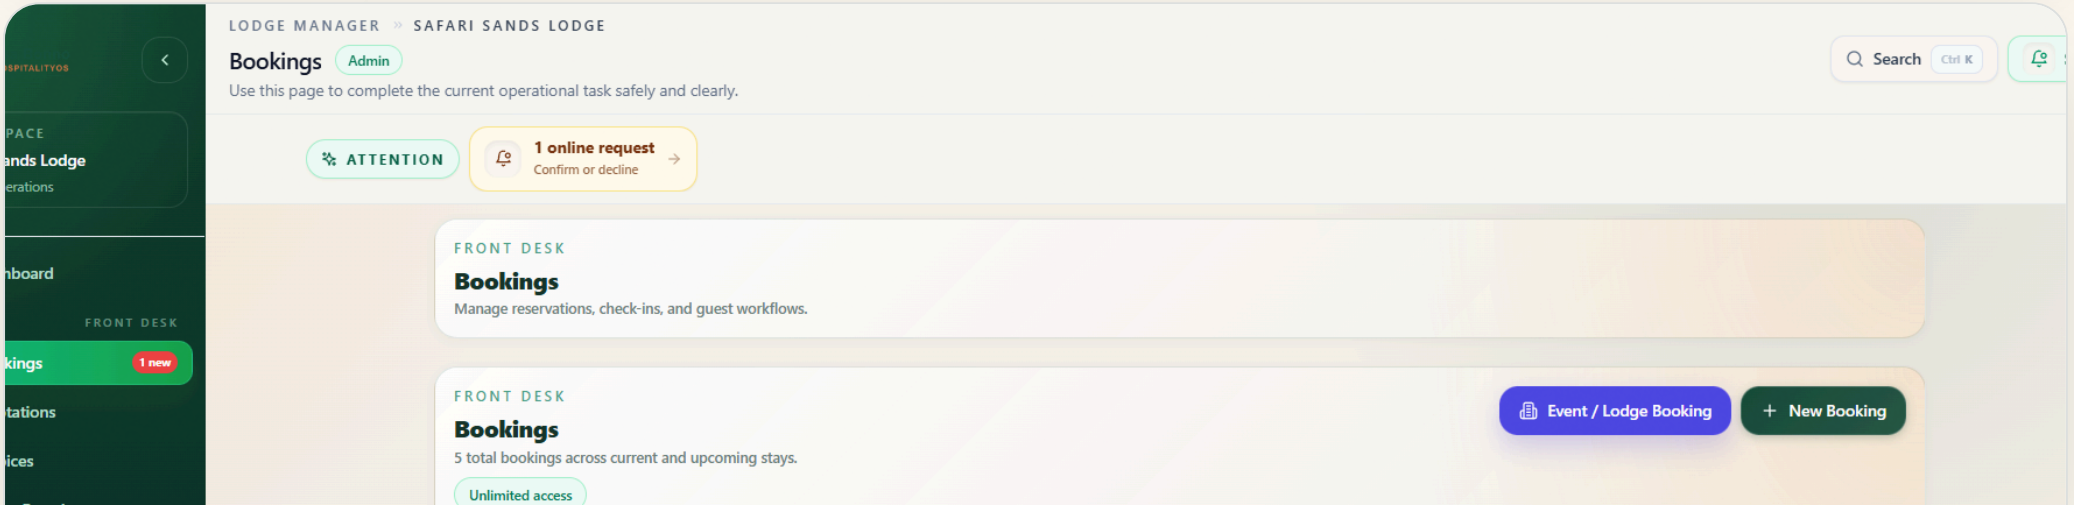
Invoices, balances, payments, expenses, reports, and cleaner follow-up—with Guest Deposits tiered from Lite through Credit Control & Automation.

POS and inventory

Bar, kitchen, stock levels, low-stock alerts, and room-supply control.

Offline reliability

Designed for real operating conditions where internet is not always perfect.



PACKAGES BUILT AROUND MATURITY

Choose the package that matches how your lodge operates today.

Tsa Bonno is not packaged as random bundles. Each level has a clear job: get organised, gain control, then grow direct demand and commercial visibility.

STARTER

Front desk operations

For lodges that need structure around daily bookings, rooms, guests, invoices, and handovers.

- Bookings and guest records
- Room board and planning
- Invoices and balances
- Offline desktop workflow

STANDARD

Management visibility

For owners and managers who need full reports, expenses, staff controls, and stronger deposit management.

- Reports and expenses
- Night audit visibility
- Prepayments Management
- Stronger operational control

PRO

Growth and commercial control

For lodges ready to connect Credit Control & Automation, read-only Manager oversight, direct bookings, POS, stock, supplies, and wider operational performance.

- Direct Booking Site
- POS for bar and kitchen
- Inventory and supplies
- Credit Control & Automation
- Read-only Manager App oversight

START WITH A FREE TRIAL

See whether Tsa Bonno fits the way your lodge really works.

Every customer can start with a free 1-month trial. Use it to test the front desk workflow, owner visibility, online booking requests, and whether Tsa Bonno makes the lodge easier to run.

What to ask during the trial

- Can the front desk see today clearly?
- Are balances and payment follow-ups easier to trust?
- Can the owner see enough without asking for manual updates?
- Would direct booking requests reduce WhatsApp and inbox confusion?
- Does POS and inventory help reduce hidden stock leakage?
